About Us

TakenoLAB is a school of technology which teaches communities how to develop software professionally and provides communities with different technological platforms to practice and express skills. It is also helping people to find solutions to their problems by connecting with online jobs. takenoLAB is there to help marginalized communities to become technologically advanced.

WHERE TECHNOLOGY GET CREATED

www.takenola.com

our services

1. Digital Skills & Software Development

Any tech service or product relies heavily on software development.In order to fill most programming and web development positions, professionals typically need to be proficient in Bootstrap, jQuery, Java, C#, PHP/JavaScript and MySQL

2. Entrepreneurship

An entrepreneur is a person who takes risks, creates innovative solutions to boost business performance and works to ensure the highest earnings, while at the same time dedicating themselves to ensuring their enterprise is going to succeed.
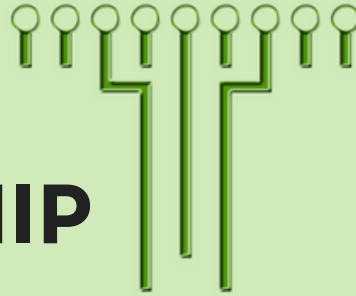

3. E-lancing

Making money and finding jobs is easier than ever with e-lancing. As the name implies, e-lancing involves working as a freelancer online. E-lancers typically find and service clients online. Unlike freelancers in the past, you are no longer required to advertise only in your town or from your personal network

Mission

To teach everyone how to code, and to provide platforms for learning, practicing, and expressing skills in constructing meaningful solutions.

SOFTWARE DEVELOPERS & ENTREPRENEURSHIP

Learn to use **small** to make **Big**

We teach communities how to develop software professionally and provide communities with different technological platforms to practice and express skills
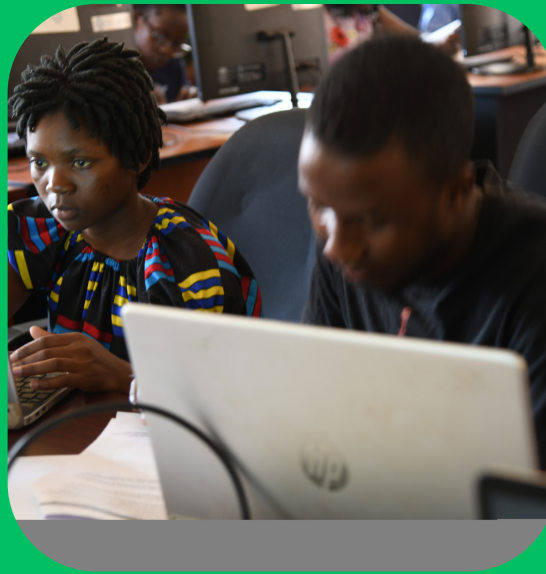

TEACHING EVERYONE HOW TO CODE IS THE MAIN FOUNDATION.

DIGITAL SKILLS & SOFTWARE DEVELOPPMENT

Have you ever had an idea that you think should be turned into a software? Did you consider the possibility that it might be impossible because of where you originate from?
We design different products (software) based on your needs at takenoLAB.

BENEFICIARIES

The main beneficiaries of TakenoLAB are the underprivileged communities in Africa, particularly in Malawi1. This includes both the local Malawian communities and the refugee communities living in the Dzaleka Refugee Camp12.

TakenoLAB's programs are designed to help these communities become technologically advanced and self-reliant. They provide free courses in digital skills, software development, e-lancing, and entrepreneurship1. This allows everyone, regardless of their cultural background or prior familiarity with technology, to advance their knowledge and skills.

By changing the community's story, lives are being changed

Our program is not just about attending and getting a certificate. It's designed to give hands-on experience. You don't need any technical skills or a marketing degree to apply. The course is recommended to you with an idea or project you wish to incubate
